

# ATS Job Workspace

## Mobile & Backend Implementation Guide (Version 1)

---

### High-Level Architecture

The Job Workspace acts as a container for all job-related AI features.

Every AI service receives the same standardized Job object rather than processing raw URLs or descriptions.

---

### Backend Responsibilities

The backend is responsible for all parsing, extraction, AI orchestration, and document generation.

The mobile application should never parse job postings.

---

# Backend Data Model

## Job Workspace

A Job Workspace represents one imported job opportunity.

Suggested fields:

- Workspace ID
  - User ID
  - Source Type
  - Original URL (optional)
  - Original Job Description (optional)
  - Imported Date
  - Last Updated
  - Processing Status
  - Parsed Job ID
- 

## Parsed Job

Contains normalized job information.

Suggested fields:

- Job ID
- Job Title
- Company Name
- Company Logo (optional)
- Location
- Employment Type
- Seniority
- Experience Level
- Required Skills
- Preferred Skills
- Responsibilities
- Qualifications
- Technologies
- Salary (if available)
- Education Requirements
- Job Description

- Original Source

## API Groups

---

### Job Import

Responsible for creating Job Workspaces.

Endpoints should support:

- Import using URL
  - Import using manual description
- 

### ATS

Endpoints

- Generate ATS Report
  - Retrieve ATS Report (optional)
  - Refresh ATS Report (optional)
- 

### Resume

Endpoints

- Improve Resume (returns tips or new cv pdf)
  - Retrieve Improved Resume (optional)
  - Regenerate Resume (optional)
- 

### Cover Letter

Endpoints

- Generate Cover Letter
  - Retrieve Cover Letter (optional)
  - Regenerate Cover Letter (optional)
-

## Interview for the job

Reuse the existing Interview APIs.

Instead of selecting a track manually:

Workspace

↓

Parsed Job

↓

AI determines topics

↓

Interview Generation

↓

Interview Session

The interview engine should remain unchanged.

---

## Study Plan (optional)

Endpoints

- Generate Study Plan
  - Retrieve Study Plan (optional)
  - Regenerate Study Plan (optional)
- 

## Mobile Responsibilities

The mobile application manages navigation, presentation, and user interaction.

AI processing remains entirely on backend services.

---

## Feature Modules

Recommended modules

- Job Import
  - Job Workspace
  - ATS
  - Resume
  - Interview
  - Cover Letter
  - Study Plan
- 

## Screen 1

Job Import

Purpose

Entry point into the feature.

Users can:

- Paste a job URL.
- Paste a complete job description.
- Open shared jobs from external applications.

The screen should clearly communicate that all three input methods are supported.

After submission:

Show processing progress.

Navigate automatically once parsing finishes.

---

## Screen 2

Job Processing

Purpose

Display extraction progress.

States

- Uploading
- Extracting
- AI Processing

- Ready
- Failed

Errors should explain whether:

- URL is unsupported.
  - Page cannot be accessed.
  - Job could not be extracted.
- 

## Screen 3

Job Workspace

This is the primary screen of the feature.

Sections

---

Job Summary

Display

- Job Title
  - Company
  - Location
  - Employment Type
  - Seniority
  - Experience
  - Skills
  - Technologies
- 

Quick Actions

Large action cards

- Score My CV
- Improve My CV
- Prepare Interview
- Generate Cover Letter
- Create Study Plan (optional)

The ATS action should receive the highest visual priority.

---

## Screen 4

### Job Details

#### Displays

- Full description
- Responsibilities
- Qualifications
- Skills
- Technologies
- Company information (when available)

Users should always be able to reference the original job posting while using AI features.

---

## Screen 5

### ATS Report

#### The report should indicate

- Overall Match
- Missing Skills
- Keyword Coverage
- Strengths
- Weaknesses
- Improvement Suggestions

#### Actions

- Improve CV
  - Generate Cover Letter
  - Start Interview
- 

## Screen 6

### Improved Resume

## Display

- AI-generated improvements
- Resume comparison
- Suggested edits

## Actions

- Save
  - Copy
  - Export
  - Regenerate
- 

# Screen 7

## Cover Letter

## Display

## Generated cover letter

## Actions

- Copy
  - Save
  - Export
  - Regenerate
- 

# Screen 8 (Optional)

## Study Plan

## Display

- Skills to learn
  - Recommended order
  - Estimated learning time
  - Priority topics
  - Interview focus
-

## Share Integration

The application should register itself as a target for text sharing.

Supported examples

- LinkedIn Jobs
- Browser pages
- Job board applications
- Any application sharing text or URLs

When the user chooses the application from the Share menu:

Receive

↓

Validate

↓

Open Job Import

↓

Automatically begin processing

The user should not need to paste content manually after sharing.

---

## Navigation

Recommended entry points

Bottom Navigation Bar Item Or Home screen

↓

Import Job

---

## User Flow

Import Job

↓

Backend Extracts Information

Score Resume

Improve Resume

Generate Cover Letter

Prepare Interview

Study Plan (optional)

Every AI feature should be launchable independently after the Job has been created.
